### **Final Project Summary**

For my final project for ITP 104, I decided to create a website dedicated to the stock market. The stock market is where the rich get richer, and I love to invest in stocks. However, one thing that I realized was that it's very hard to do so as a beginner. For one, there are so many stocks to invest in and pick from. Secondly, there are numerous sectors of stocks that a beginning investor should know about. Therefore, I decided to create a website that gives general information about the stock market and provides numerous sectors and example stocks. The purpose of the website was to share knowledge of the stock market.

#### **Extra:**

- **Iframes** used on the homepage on the bottom, where I include a video about the stock market from YouTube.
- **Transition** and **Transformation** property used in main.css across all pages. When the page is clicked, I use the transformation property "rotate" to indicate that the two aspects of the page are clickable. I also use the transition property when hovering over "stock sectors" so the pink color slowly fades in for readability.
